React: Interview question

React – Interview question

The following exercise contains the following subjects:

- React

Exercise requirements:
Initially, we want to get the information in the data.json file like we do an API call.
We need to display the list of names on the screen without using props (use context).
In addition, we need the list to be sorted by names and to have the option to change the direction of the sorting (ascending order / descending order)

You are allowed to do whatever you want, add, move, and remove files.
Do not modify the data.json and ListItem.js files but you must use them.

Act like it's a real project, and only design if you have nothing to improve.
